# ZERO

recycle glass surfaces

# ZERO

recycle glass surfaces

The originators of the first numerical systems, the Sumerians, were also the first in need of a digit that represented the absence of a number. A double slanted wedge placed between columns of digits was the symbol they adopted for zero, which originally served as a simple placeholder to aid in reading complex numbers, not as a number itself.

With the development of positional notation, for which zero was crucial, this symbol acquired its own identity and became the independent number we know today. Since then, it has multiplied the power of mathematics, quietly but immeasurably revolutionizing the field.

Zero was born in India but baptized in Europe. The Italian mathematician Fibonacci popularized the decimal system in the Western world and began using the word "zero" to designate the current notation. ZERO precisely symbolizes that, the revolution of the lack of something. For the first time, a material with high-quality quartz properties labelled itself as free of crystalline silica with outstanding original aesthetics.

ZERO exhibits extreme translucency and visual depth reflected in an incredibly realistic natural appearance, free from visible grains in the particulate. Its clear and well-defined patterns stand out due to their versatility and richness in tones and nuances, while its white backgrounds, the purest ever achieved in a synthetic stone, result in an unparalleled reflection of light, clarity, and brightness.

ZERO radically transforms the stone industry, reducing to the maximum extent possible the environmental impact in its production and firmly contributing to a healthy and secure work environment.

ZERO unravels the secrets and beauty of natural stone. Reflecting unparalleled mastery in a stone with a unique, technologically enhanced formula, and a further perfected full-body.

# THE INDUSTRY SPEAKS, AND WE LISTEN

Made with CRYSTALLINE SILICA Free materials

## CRYSTALLINE SILICA FREE

The stone industry is undergoing a transformative journey. The increasing regulations on crystalline silica in synthetic stones have prompted companies to rethink the immediate future of the sector.  Once again, ZERO proves its visionary approach by anticipating market demands and taking the lead in driving change with RGS. A material designed with cutting-edge technology that maintains the highest standards of high-end quartz surfaces but is made with crystalline silica-free materials.

RECYCLED GLASS SURFACES

## WHERE ZERO MEANS EVERYTHING

### RGS (RECYCLED GLASS SURFACES), CRYSTALLINE SILICA-FREE REVOLUTION

A new and revolutionary way of composing technical stones unfolds before the eyes of the world. ZERO inspires the future industry trends by introducing RGS Material (Recycled Glass Surfaces), the first man-made material made with crystalline silica-free materials that maintains the high aesthetic standards of traditional quartz.

Zero unravels the secrets and beauty of natural stone. Reflecting unparalleled mastery in a stone with a unique, technologically enhanced formula, it is produced with the lowest carbon footprint of any surface on the market.

Its exclusive formula includes recycled materials such as glass and polyurethane resins, and eliminates crystalline quartz materials from its composition entirely. RGS Material (Recycled Glass Surfaces) behaves and cuts like traditional quartz, but its revolutionary raw material avoids the drawbacks of handling a surface containing crystalline silica. Safety and sustainability are the guiding principles throughout the entire value chain in Zero, prioritizing the well-being of the communities involved.

Its cutting-edge Phi 4R+ Technology allows for the reformulation of the most sophisticated quartz surfaces -maintaining their outstanding features in terms of appearance, smoothness, and extreme translucency - while improving the composition and manufacturing process of the slabs.

Likewise the application of this technology results in a formula with a higher percentage of recycled content incorporated to the body of the slabs, zero water waste in the manufacturing process and a very low environmental impact.

# THE MOST BEAUTIFUL PRODUCT

This patented technology has been specifically developed to ease the cleaning and maintenance with a minimum effort, keeping your surfaces look new for longer. Only NEOS technology protects your countertops with a permanent bond which lasts forever, making ZERO the most durable product in the industry.
NEOS Technology is designed to add an extra layer of protection. Its permanent bond lasts forever, making Zero surfaces the most durable product in the industry.

Nano Enhancement of Surfaces (NEOS) is a high-performance stain and substance repellent technology developed by our engineers to keep your surfaces clean with minimum maintenance. Invisible to the naked eye, NEOS has been formulated to produce a hybrid protectant with physical characteristics that resist staining, keeps surfaces clean and guards them against everyday wear and tear. With NEOS, Zero surfaces are safely protected against most common household chemicals.

4R+
REMOVE
REUSE
RECYCLE
RESPECT

The stone industry has initiated a race to comply with the new regulations regarding crystalline silica in countertops. Embarking on a journey of innovation and environmental responsibility, ZERO takes the lead thanks to its innovative technology and redefines the possibilities of modern design.

Guided by four core principles—remove, reuse, recycle, and respect — the PHI 4R+ cutting-edge technology develops a unique, revolutionary formula that pushes the boundaries of aesthetics, sustainability and functionality.

**REMOVE** completely crystalline silica

**REUSE** Nearly 100% of water

**RECYCLE** materials

**RESPECT** and lower environmental impact
